# M-35: The Highway Henry Ford Stopped

As ironic as it may seem, Henry Ford—the person who revolutionized the automotive industry and enabled the "common man" to afford his very own vehicle—actually helped halt a highway project in northwestern Marquette County in the Upper Peninsula of Michigan. In the end, the personal desire of one man, one very influential man, weighed more heavily than those of the public at large. But first, some background.

M-35 in the 1920s likely looked a lot like Co Rd 510 does day in this contemporary photo.

When the first state trunklines were laid out in the second decade of the twentieth century, very few state-maintained roads ran along the Great Lakes shorelines. In fact, most roads ran well inland of the 'big lakes.' So, during the 1920s and into the 1930s, the State Highway Department began a program of determining shoreline routings for much of the Great Lakes coastline around the state on both peninsulas. Several portions of these lakeshore routings were built, such as [US-2](#) between Nausaugus and St Ignace and [US-23](#) between Au Gres and Cheboygan.

In 1919, the State Highway Department designated a new trunkline route to run northwesterly from the Negaunee area through the Huron Mountains of northwestern Marquette and northeastern Baraga Counties, then southwestly along the Keweenaw

Bay shoreline to L'Anse. At that time, this area was only served by logging roads and two-track trails. This new trunkline would not serve any major population centers—only the small hamlets of Big Bay and Skanee would be situated within a few miles of the new highway—so it can be assumed this route was designated more to serve a relatively isolated area and bring another highway closer to a stretch of Great Lakes shoreline. The new highway was also given the M-35 designation.

While M-35 from Negaunee to L'Anse via the Huron Mountains was officially "determined" as a state trunkline in 1919, it was not until 1926 that work was completed on a major portion of the route in Marquette Co and from 1928-32 saw similar work completed on the Baraga Co portion. The middle of the route—the segment through the Huron Mountains west of Big Bay—saw very little work performed, if any. It can be assumed since this was one of the most challenging parts of the route, the State Highway Department decided to approach the mountains from both directions, eventually meeting in the middle, thus completing the route. During this time period, the route of M-35 on the official state highway maps issued by the MSHD showed the highway with a dashed line and the label "IMPASSABLE."

One major task completed early on was the bridging of the Dead River northeast of Negaunee. Interestingly, the bridge used not only previously spanned a different river, but one in a completely different state! According to [MDOT](#), the MSHD bought the bridge in 1919, had it disassembled from its location in Pennsylvania where it crossed the Allegheny River upstream from Pittsburgh, and transported to Marquette County. In 1921, the MSHD erected this 271-foot long, one-lane span across the Dead River. The bridge survives to this day, carrying Co Rd 510 (the successor to M-35) traffic across the Dead River. It even survived a catastrophic flood in May 2003 when a dam upstream burst. Several other Dead River bridges were damaged or washed out, but this span survived, unscathed.

Co Rd 510 (former M-35) truss bridge over the Dead River north of Negaunee, erected 1921.

It was during this time industrialist Henry Ford had purchased hundreds of thousands of acres of land in the U.P. and was using the wood harvested from the land in the manufacture of his automobiles in Detroit. (This was in a time where real wood was used!) Alberta, just south of L'Anse, was Ford's center of operations in the north-central Upper Peninsula and Ford-operated railroads fanned out to the east into the Huron Mountains, transporting logs to his mills at Alberta. Ford loved to travel to the U.P. and even brought close friends Harvey Firestone and Thomas Edison (yes, that Harvey Firestone and that Thomas Edison) to the area on travelling expeditions. Ford also had a "cottage" built at Pequaming, one of his company towns in Baraga Co on the Keweenaw Bay. Ford, however, had his eye set on becoming a member of the ultra-exclusive Huron Mountain Club. This is where Henry Ford and the future of M-35 crossed...

Backtracking about four decades, a group of wealthy investors from nearby Marquette as well as similar men from Detroit and Chicago purchased a massive tract of land in northern Marquette County on the shores of Lake Superior northwest of Big Bay. This 24,000-acre tract was intended to be a private, membership-based hunting and fishing preserve. The club limited membership to only 50 primary members (those who are allowed to own their own cabin) and 80 "associate" members (not allowed to own a cabin), which resulted in extremely limited and exclusive membership. In the 1920s, Henry Ford himself wanted to become a member of the Huron Mountain Club, but since the membership roster was full, Ford was forced to wait until a club member either resigned or died. Obviously, a long waiting list meant even Ford might be forced to wait years to gain membership, if ever. Ford needed to stack the deck in his favor to ensure he was able to become a member of the HMC as soon as possible.

As noted above, Ford owned large tracts of land in nearby Baraga County as well as in northern Marquette County. To help his cause—that of gaining membership in the Huron Mountain Club—Ford purchased additional acreage in Marquette County adjacent to the HMC holdings including land along the proposed route of M-35. Ford worked to stop construction of the highway through his holdings and, according to local author and historian Fred Rydholm, an Attorney General's opinion helped seal the fate of M-35 through the Huron Mountains. The uncompleted portion of the highway through the Hurons was cancelled and, within a decade, the entire route of M-35 from US-41/M-28 (between Negaunee and Marquette) to US-41 at L'Anse was removed from the state trunkline system. Due to his assistance in getting the state highway running past the HMC cancelled, Henry Ford was granted his full-time membership in the HMC soon after. He then hired Albert Kahn to design then build a \$100,000 "cabin" which, in 1929, was a large sum!

## M-35 in Pieces

The effects to the route of M-35, however, were not immediate. The highway remained on official maps and documents through the 1930s, all the while being shown as with the "IMPASSABLE" label through the Huron Mountains. Some time in mid-1939 the final decision was made to give up on completing the proposed M-35 through the Hurons and the route from the junction of Co Rd 510 southwest of Big Bay to the corner of Skanee & Portice Rds five miles east of Skanee. (The Spring 1938 official highway map and the July 1, 1939 trunkline status maps show the route, while the July 15, 1939 official map shows the section as being removed.) While this 19-mile long mid-section of M-35 was removed from the maps, the remaining "spurs" from Negaunee-Marquette northwesterly and from L'Anse northeasterly remained mapped as state trunklines! This condition was only temporary, perhaps due to confusion about the future of the entire corridor, as the entire portion of M-35 from [US-41/M-28](#) between Negaunee and Marquette to [US-41](#) at L'Anse was officially "cancelled" as a state trunkline by the State Highway Department on July 13, 1939, two days before the issue date on the Summer official highway map. (Obviously, the July 15, 1939 map likely went to press months before its issue date, when the status of M-35 in the Hurons was still in doubt.)

The cancellation of all of M-35 between Negaunee-Marquette and L'Anse left two widely-separated segments of the highway remaining. M-35 began in Menominee at the Wisconsin state line and proceeded northerly through Escanaba and Gwinn to Negaunee, where it was now severed from the remaining section beginning at L'Anse-Baraga and continuing westerly to [US-45](#) near Rockland. The two discontinuous segments of M-35 were separated by approximately 65 miles, via highway. This discontinuity was seemingly rectified in the 1950s when the portion of [US-41](#) and [M-28](#) from Negaunee to L'Anse was concurrently designated with M-35. This resulted in a three-way concurrency of [US-41/M-28/M-35](#) between Negaunee and central Baraga County east of Covington. The new concurrent designation is shown on official highway maps for the first time in early 1953, however it is unclear whether M-35 signs appeared along that route prior to that time. A state trunkline log dated January 1948, however, lists M-35 as being a two-segment, discontinuous highway supporting the fact the gap was not signed until after that time.

The above configuration, where M-35 ran concurrently with [US-41](#) from Negaunee to Baraga, comes to an end in 1968 when the portion of M-35 from Baraga to Rockland is redesignated as M-38 and the concurrent portion of M-35 from Negaunee to Baraga is removed. The northern terminus of M-35 is now at [US-41/M-28](#) east of Negaunee. (M-35 had been routed out of downtown Negaunee a few years prior to avoid a sinking area caused by flooded underground mine shafts as well as to avoid operations at the Empire Mine north of Palmer.)

## M-35 in the Huron Mountains Today

Today, no navigable road exists through the Huron Mountains along the line of the proposed M-35 from the 1920s and 30s, not even a two-track trail. In fact, only one generally passible road through the area exists north of [US-41/M-28](#) travelling through the Yellow Dog Plains to the south of the main Huron Mountain range. That route, utilizing Triple A, Ford, Northwestern and Erick Roads, provides access to the constructed portions of the proposed M-35 route.

From the Marquette-Negaunee area, the former M-35 route exists as a rather well-maintained county road designated Co Rd 510. From Co Rd 502 just off [US-41/M-28](#) northwesterly for about five miles, it is a two-lane, paved road while the next 19 miles is two-lane gravel-surfaced. Approximately 25 miles north of [US-41/M-28](#), Co Rd 510 turns northeasterly toward Big Bay and the former M-35 route continues northwesterly as a road called "Blind 35" on many maps. Blind 35 continues for approximately 3-4 miles, slowly becoming a lower-quality road. It is navigable by a passenger car in the best conditions, while four-wheel drive and higher ground clearance are needed in poorer conditions, as the road is not actively maintained. Field trips to the area by the author in September 1999 and November 2003 showed much evidence that the route was to be a full-blown state highway. The route itself has a very nice grade with long, sweeping curves—the type one would find on a state trunkline—in addition to longer straight segments, uncommon for minor backroads and two-tracks in remote country. It also seems as if some rock cuts into the side of a hill were made for this highway as well.

"Blind 35" today, a portion of the original M-35 route into the Huron Mountains from the southeast. The route is generally passable in most conditions. (Photos ©2003 Christopher J. Bessert)
